DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

Group 1 is drawn to claims 1-36 that claim a laser device comprising a target position, optical component, a laser energy source each separated by appropriate distances, and a laser source manipulation mechanism exhibiting a mechanical resolution less than a spatial resolution of laser energy at the target position.

Group 2 is drawn to claims 37-54 that claim a laser device comprising a target position, optical component, a laser energy source separated by appropriate distances, and a laser source manipulation mechanism comprising a mechanical index that comprises a pivot point for lateral and vertical motion.

Group 3 is drawn to claims 55-63 that claim a laser device comprising an optical component, a laser energy source separated from the optical component, and a laser source manipulation mechanism comprising a Peaucellier linkage.

Group 4 is drawn to claims 64-73 that claim a laser device comprising a target position, optical component, a laser energy source located outside the adverse environment, and a laser source manipulation mechanism comprising electro-mechanical parts located outside the adverse environment.

Group 5 is drawn to claims 74-80 that claim a laser device comprising a target position, optical component, a laser energy source each separated by appropriate distances, and a laser source manipulation mechanism linking vertical and lateral laser source motion to the respective

Art Unit: 2881

indices producing related displacement of energy at the target position and exhibiting a mechanical resolution less than a spatial resolution of the respective vertical and lateral displacement of the laser energy at the target position.

Group 6 is drawn to claims 81-92 that claim a laser device comprising a target position, optical component, a laser energy source separated from the optical component and having the appropriate lateral and vertical rotational axis, and a laser source manipulation mechanism laterally and vertically positioning the laser source.

Group 7 is drawn to claims 93-106 that claim a laser device comprising a target position within a high magnetic field, an optical component, a laser energy source separated from the optical component, a laser source manipulation mechanism laterally and vertically positioning the laser source, and a damping device operating under Lenz' Law.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 19 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after

Art Unit: 2881

the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
